## Problem-Solving Practice

## Graph Proportional Relationships

1. BAKING Rachel baked 3 cakes in 2 hours, 4 cakes in 3 hours, and 5 cakes in 4 hours. Determine whether the number of cakes baked is proportional to the number of hours.

2. CALORIES A person can burn 8 Calories per minute of running. Determine whether the number of Calories is proportional to the number of minutes.

3. RAINFALL It rained 2 inches in one hour, then after two hours, it had rained a total of 3 inches. After four hours, it had rained a total of 5 inches. Determine whether the number of inches of rainfall is proportional to the number of hours.

4. PROFIT If Stephanie sells 3 necklaces, she earns a profit of $\$ 5$. If she sells 4 necklaces, her profit is $\$ 10$. Five necklaces sold gives her a profit of $\$ 15$ and six necklaces sold gives her a profit of $\$ 20$. Determine whether the amount of profit is proportional to the number of necklaces sold.
